SUMMARY

Aspiring DevOps Engineer with hands-on experience deploying full-stack applications on AWS and working with Linux system administration. Passionate about cloud infrastructure, automation, and scalable systems. Continuously expanding my knowledge of DevOps practices, containerization, and CI/CD while seeking opportunities to contribute to modern engineering teams.

EDUCATION

Aryabhatta College, University of Delhi
Bachelor of Science (Hons.) in Computer Science

2022 – 2026
Delhi, India

SKILLS

Languages: Python, Bash/Shell Scripting, JavaScript, SQL, C++, HTML, CSS, Markdown
Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC, Security Groups, Auto Scaling), Linux Server Administration
DevOps: Docker, PM2, Nginx, CI/CD
Frameworks & Libraries: Django, React, Tailwind CSS, TensorFlow (Keras), PyTorch, NumPy, Pandas, Scikit-Learn, MediaPipe, SentenceTransformers
Tools: Git, GitHub, Linux (Ubuntu), VS Code, Jupyter Notebook, n8n

PROJECTS

Semantic Image Search Engine

[GitHub](#) 🌐

- Developed a semantic image retrieval system that search image based on the general Description of image
- Used BLIP for image caption generation and Sentence-Transformers (all-MiniLM-L6-v2) to create semantic embeddings for images and queries
- Implemented FAISS vector embadding Database for search based on image meaning rather than keywords
- Deployed the application on AWS EC2 and provided a live web interface for testing and demonstration

Telegram File Processing Bot

[GitHub](#) 🌐 [@test2ossBot](#)

- Developed a Telegram bot in Python that provides image resizing, PDF merging, and image-to-PDF conversion.
- Implemented interactive conversation-based workflows using python-telegram-bot, inline keyboards, and state management for a seamless user experience
- Built file-processing utilities using Pillow and PyPDF2 with support for multiple file formats and error handling
- Deployed and managed the bot on an AWS EC2 Linux server using PM2 for process management, ensuring continuous availability and automatic restarts.

ReserveTable Restaurant Reservation Management System | MERN, RESTful API

[GitHub](#) 🌐 [Live @](#) 🌐

- Developed a full-stack restaurant reservation platform using the **MERN** (MongoDB, Express.js, React.js, Node.js) architecture with dedicated customer and admin dashboards.
- Designed and implemented secure **RESTful APIs** with **JWT Authentication** and **Role-Based Access Control (RBAC)** for reservation management and administrative operations.
- Built an automated table allocation engine supporting **multi-table reservations**, **shared-table dining**, and optimized seat utilization using custom allocation logic.

CERTIFICATIONS

Research Paper Presentation – ICMSCI 2026: Presented a research paper Abstract "A Hierarchical Multi-Model Framework for Body-Part-Aware Skin Disease Classification" at the International Conference on Mathematical Sciences and Computational Intelligence (ICMSCI-2026) held by PGDAV College, University of Delhi.
